Specialist Contractor

protecting your **vital infrastructure**

Working to British
Standards **BS EN 1504**
& **BS EN ISO 12696**
for **CP Systems**

sustainable future
starts with understanding
our impact **today**

Recognised Industry Standards

The Safer Parking Scheme and Life Care Plans for car parks are recognised industry standards for the parking sector. The Safer Parking Scheme is managed by the British Parking Association and ensures that the car park provides a safe environment for users. Life Care Plans are an industry standard to ensure the structural integrity of the car park is managed throughout its service life. CRL is able to assist clients to ensure their parking structures meet these standards for the personal safety of users and the structural integrity of the car park.

Nothing is
so **important**
that it cannot be
done **safely** and
sustainably

70 Years of Experience

CRL is a specialist contractor providing a comprehensive service for the inspection and refurbishment of multi storey and underground car parks. Car parks are important assets for many shopping centres and businesses and it is essential for these to be maintained both for safety and commercial reasons. Working with our clients we

undertake condition and structural assessments to identify the nature and extent of any defects using our survey division, CRL Surveys Ltd. We then advise on the repair options and costs so that CRL can deliver efficient, innovative solutions in a safe and professional manner with minimal disruption to users.

Slowing Down Corrosion

Many car parks deteriorate due to corrosion of the reinforcement from de-icing salts, brought in by the vehicles, which causes the concrete to crack and spall. This is a safety hazard to the car park users and if not treated will also structurally weaken the car park and lead to closure. CRL undertakes the repairs

to the concrete and if required can design and install a corrosion control system to improve durability all in accordance with the British Standards BS EN 1504 and BS EN ISO 12696. The repair works are programmed to ensure that the car park can remain in limited use whilst ensuring the safety of the public.

Deck Waterproofing Enhanced Durability & Appearance

Deck waterproofing is used to both enhance the appearance and the durability of car parks. CRL are approved installers of a range of deck waterproofing systems which are liquid applied to the decks with the parking bays and traffic/pedestrian aisles delineated to enhance safety. The membranes are installed with proprietary joint systems to ensure the decks are watertight. These membranes not only help protect the concrete decks from de-icing salts which are a major cause of the concrete deterioration but also dramatically improve the aesthetic appeal of the structure.
